

UNLIMITED

KlingAI x Higgsfield

Up to 30 days of Unlimited Kling Motion Control, Kling 2.6, Kling 2.5, Kling O1 Video Edit

Workflow Overview:

- 1 Open Higgsfield and use Google Nano Banana Pro for image generation. You can use reference images for accuracy.
- 2 You can generate a single image, or create two angles per scene for greater camera control and precision.
- 3 Go to Video and select Kling as your video model. Use the First Frame / Last Frame method with a 10 second generation.
- 4 You can use a tool like Adobe After Effects to speed ramp your generated videos so they feel fast and dynamic

Here are the video prompts we used , so you can recreate the same style of shots and workflow for yourself:

First Frame

Prompt:

Orbit around the man who is stood in a photography studio, we orbit around the man completely, but he does not move at all. As we orbit around him, we can see the dark shadows of the edges of the studio backdrop.

First Frame

Prompt:

The camera orbits from left to right in a big motion, keeping the pendant in the center of the frame at all times. the man is a statue and cannot move. the pendant is made of stone and cannot move, it does not wobble, it does not change direction or spin. nothing in the frame moves except from the camera.

First Frame

Prompt:

We orbit around the stone statue of the man as he stays completely still, no movement from him, only the camera moves around him in a 360 motion.

First Frame

Last Frame

Prompt:

The camera zooms out of the pile of money in a smooth cinematic motion, revealing a stone statue of a man, frozen, sat on top of the money. the man cannot move as he is made out of stone.

First Frame

Last Frame

Prompt:

The shot begins with a close-up of a man holding a coin balanced on his thumb, ready to flip. He flicks his thumb, sending the coin spinning upward. The camera tilts and rises with the coin, tracking its rapid flips as light catches its surface. The focus stays on the coin as it climbs, then transitions smoothly into a top-down view showing the man below, watching it rise through the air. The scene has clean lighting and a calm, focused mood, centered entirely on the motion of the coin and the smooth camera movement.

First Frame

Prompt:

We orbit around this man sat on the pile of money in one smooth cinematic motion, in a complete 360. the man does not move as he is a statue and is made out of stone.

First Frame

Prompt:

Zoom out and rotate the camera as the shot gets wider, the car does not move

First Frame

Last Frame

Prompt:

The camera tracks forwards towards the car and the stone statue of the girl. nothing in the scene moves apart from the camera as we get closer.

First Frame

Last Frame

Prompt:

The camera tracks closer to the stone statue of the woman in one smooth cinematic motion. the woman does not move as she is made out of stone.

First Frame

Last Frame

Prompt:

The camera zooms into the pendant in one smooth cinematic motion. Nothing in the frame moves, just the camera zooming into the pendant
